1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-3, drawn to a head drum assembly including the structural of the drum cover, classified in class 360, subclass 271.1.
  - II. Claims 4-6 and 17-24, drawn to a head drum assembly including the electrically connection between the drum and the head, classified in class 360, subclass 271.5.
  - III. Claims 7-16 and 25-29, drawn to a head drum assembly including the structural of the motor stator, classified in class 360, subclass 271.7.
2. The inventions are distinct, each from the other because of the following reasons:
3. Inventions I and II-III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it does not require the particulars of the subcombination as claimed for patentability. The subcombination has separate utility such as the electrically connection relationship between the rotary drum and the magnetic head as set forth in Group II, or the detail structural limitations of the motor stator as recited in Group III.
4. Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such

as the electrically connection relationship between the rotary drum and the magnetic head as set forth in claims 4-6 and 17-24; on the other hand, invention III has separate utility such as the detail structural limitations of the motor stator as recited in claims 7-16 and 25-29. See MPEP § 806.05(d).

5. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Groups II and III, restriction for examination purposes as indicated is proper.

6. Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group III, restriction for examination purposes as indicated is proper.

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
